Piscine de Pré-sélection

Day
01

LINUX - DISCOVERING YOUR ENVIRONMENT

First, take some time to discover your working environment (keywords, commands,. . .). Then learn how to lock your workstation, it might prove very useful.

TASK 01 - CREATE A DELIVERY DIRECTORY

Create a directory named ***delivery*** in your home directory's root.
Within that directory, create another one named **task01**, which will contain:

- an empty file named ***test01*** with read permissions for everyone, then read and write permissions only for the owner,
- a file named ***test02*** containing "***If you don't struggle, you don't improve.***". Everyone must have the rights to read and execute this file, but only you can write in it,
- a symbolic link (symlink) named ***test03***, which is a reference to ***test02***.

Read the ***ln*** man carefully!

TASK 02 - Z

Create a file ***delivery/task02/z***, which displays the character '***Z***' followed by a line feed (\n) when the binary ***cat*** is used to read it:

TASK 03 - MIDLS

Write in ***delivery/task03/midLS***, a command that lists the current repository's files and directories (without hidden files, ellipses, or files starting with a dot) sorted alphabetically.
Files and directories should be separated by commas and directories must end with a slash.

Add execution permission to everyone

ACCESS YOUR REPOSITORIES - GIT AND GITHUB.COM

From this point onwards, all your projects will have to be turned-in in a Github repositories. Github repositories are simply ***git repositories*** hosted on github.com. So first, create an account on github.com using the email address that you provided when you was applying.

Now generate an ssh key named ***id_rsa*** and add it to yout GitHub account. This key will allow you to authenticate with github (and thus accessing your repositories) via your terminal.

For more information, ...

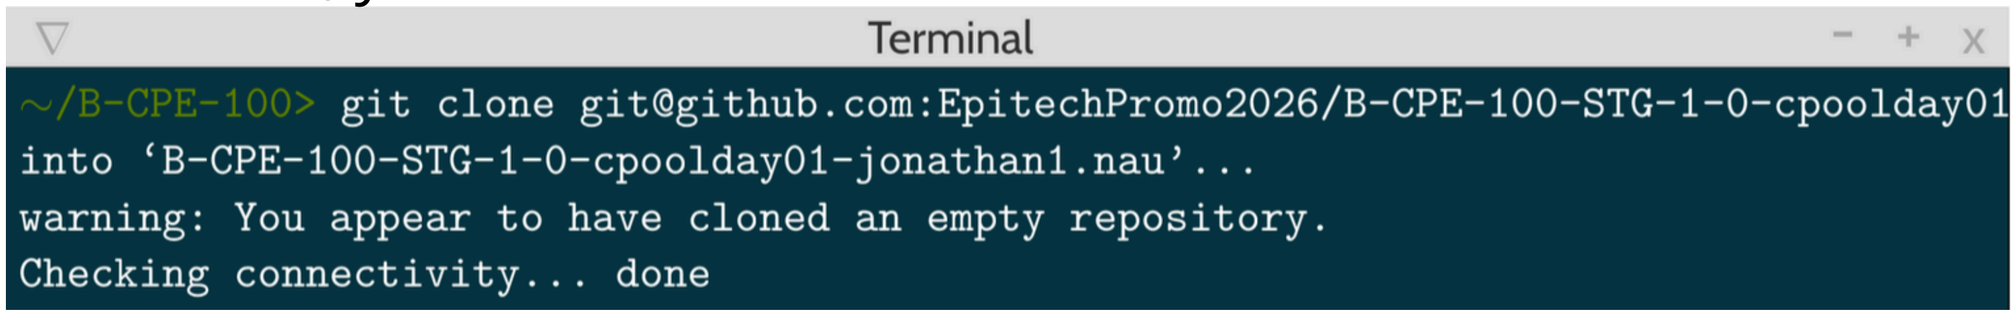
DO A DELIVERY - CLONE A REPOSITORY AND PUSH YOUR WORK (1/2)

Now, it is time to check if the previous part really works. To do so, we are going to ***clone the repository*** for todays tasks. The repository is available for git at the following address: xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

From a repository webpage, you can click on the “Code” button to have access to the repository link (to clone it using SSH).

DO A DELIVERY - CLONE A REPOSITORY AND PUSH YOUR WORK (2/2)

If it worked, you should have a result similar to:



Now, You have to move all task directories (previously created into ***delivery***) into the repository of the day. Then, you have to inform "***git***" of your wish to ***add*** these files. After that, you have to ***commit*** a new local revision which contains all these modifications. Finally, you have to ***push*** this revision to the remote server. From now on, commit and push at the end of each task.

Make sure that the file permissions have not been altered during the copy/move.

TASK 04 - MR_CLEAN

Write a file named ***mr_clean*** - stored at the root of the repository of the day
- a command to find and delete every file from the current directory and all subdirectories which end by ~ or which start and end by #.
Give execution rights to the owner of the file.

Only one command is allowed
(no ";", neither "&&" or anything. . .)

Read carefully the manual of ***find***

TASK 05 - PUSH_THAT.SH

Write a shell script (using bash as shell) named ***push_that.sh*** at the root of your repository. The script must add all of the current folder's files and push them to the repository. The script must take a commit message as parameter and should be able to handle simple problems and still push your files.

Having trouble figuring out how to retrive parameters?
man bash.

Where you're writing a script, dont't forget the shebang!
Don't forget to give execution right to shell scripts as well!

TASK 06 - TREE

Reproduce the folders structure displayed below.

Terminal

```
~/B-CPE-100> tree -FQ task06 | head -n 32
"task06"
|-- "1910s"/
|   |-- "1911" -> "../Solvay Conferences on Physics/The theory of radiation and
    quanta"/
|   `-- "1913" -> "../Solvay Conferences on Physics/The structure of matter"/
|-- "1920s"/
|   |-- "1921" -> "../Solvay Conferences on Physics/Atoms and electrons"/
|   |-- "1924" -> "../Solvay Conferences on Physics/Electric conductivity of metals
     and related problems"/
|   `-- "1927" -> "../Solvay Conferences on Physics/Electrons and photons"/
|-- "1930s"/
|   |-- "1930" -> "../Solvay Conferences on Physics/Magnetism"/
|   |-- "1931" -> "../Solvay Conferences on Chemistry/Constitution and
    Configuration of Organic Molecules"/
|   |-- "1934" -> "../Solvay Conferences on Chemistry/Oxygen, and its chemical and
    biological reactions"/
|   `-- "1937" -> "../Solvay Conferences on Chemistry/Vitamins and Hormones"/
|-- "1940s"/
|   `-- "1947" -> "../Solvay Conferences on Chemistry/Isotopes"/
|-- "1950s"/
|-- "Professors"/
|   |-- "Frederic Swarts"
|   |-- "Hendrik Lorentz"
|   |-- "Paul Karrer"
|   |-- "Paul Langevin"
|   `-- "William Jackson Pope"
|-- "Solvay Conferences on Chemistry"/
|   |-- "Constitution and Configuration of Organic Molecules"/
|   |   `-- "chair" -> "../../Professors/William Jackson Pope"
|   |-- "Isotopes"/
|   |   |-- "chair" -> "../../Professors/Paul Karrer"
|   |   `-- "participants"/
|   |-- "Oxygen, and its chemical and biological reactions"/
|   |   `-- "chair" -> "../../Professors/William Jackson Pope"
|   `-- "Vitamins and Hormones"/
|       `-- "chair" -> "../../Professors/Frederic Swarts"
```

```
`-- "Solvay Conferences on Physics"/
    |-- "Atoms and electrons"/
    |   `-- "chair" -> "../../Professors/Hendrik Lorentz"
    |-- "Electric conductivity of metals and related problems"/
    |   `-- "chair" -> "../../Professors/Hendrik Lorentz"
    |-- "Electrons and photons"/
    |   |-- "chair" -> "../../Professors/Hendrik Lorentz"
    |   `-- "participants"/
    |       |-- "A. Einstein"
    |       |-- "E. Schrodinger"
    |       |-- "H.A. Lorentz"
    |       |-- "M. Planck"
    |       |-- "M. Sklodowska-Curie"
    |       |-- "N. Bohr"
    |       |-- "W. Heisenberg"
    |       `-- "W.L. Bragg"
    |-- "Magnetism"/
    |   `-- "chair" -> "../../Professors/Paul Langevin"
    |-- "The structure of matter"/
    |   `-- "chair" -> "../../Professors/Hendrik Lorentz"
    `-- "The theory of radiation and quanta"/
        `-- "chair" -> "../../Professors/Hendrik Lorentz"

30 directories, 23 files
```

Git handles empty directories differently.

TASK 07 - TAR

Create a compressed (with Gzip) tarball of the content of the previous task's directory.

Delivery: ***task07/task06.tgz***

man tar
